

Note: the name next to every point is NOT the name of the person who completed the assignment; it's just the name of the person who stated this specific opinion

Bujo Design | Main contribution: everyone | Date: 05/18/21

MAD	SAD	GLAD
What made the team mad?	What made the team sad?	What made the team glad?
<div>yuanzhe - dont even know the language/front end stuff to begin with so lot of catching up to do</div> <div>Nada - we are all not experienced in group development settings, too ambitious/confused about which features to implement feature overload</div> <div>siddharth - we have to learn new db tools and the labs dont touch on db, also so many db frameworks to choose from</div>	<div>Nada - we had to give up on many features that we thought were really cool (no experience so didnt realize how hard it was to implement)</div> <div>Jialu - we are all in non SD timezone and all of the TA meetings are made based on SD timezone</div> <div>Siddharth - we are all in different timezone so we wish we could have had a TA in our timezone</div>	<div>Rong - we have a relatively good skeleton as of now and good division of labor</div> <div>nada : we have good ideas and had no creative blocks on the Bujo app, we have good alternatives to things that may not work out</div> <div>siddharth - we have similar timezones so the meeting times are pretty good between the members</div>

CI/CD Pipeline | Main contribution: Alexandre | Date: 05/18/21

MAD	SAD	GLAD
What made the team mad?	What made the team sad?	What made the team glad?
<div>Nada - the github course tells you what the pipeline is but is very sparse on implementation</div> <div>alex - we dont have access to enviornments and rules (ex: require a review before committing to main branch) as we are being paywalled</div>	<div>alex - linter on re application will not work on remote commit, it must be pushed to the branch (nothing we can do but understandable but github)</div>	<div>nada - glad it exists in the github marketplace! good that there is a startingpoint for us that is well made</div> <div>alex - relatively easy to implement as it is mostly copy paste and custom tailoring it</div>

Task: Walking Skeleton | Main contribution: Qianjun, Rong, Long | Date: 05/18/21

MAD	SAD	GLAD
What made the team mad?	What made the team sad?	What made the team glad?
<div>Rong - todo list is really hard (statistics and complicated algorithm)</div>	<div>QianJun - we are again not familiar with the front end, and the DB backend.</div> <div>Rong - worried about data storage</div>	<div>Qianjun - we we look at the calendar we have a very standardized caldendar thats built in (pure 100% vanilla js) and it comes with many useful functions like dateonclick()</div> <div>Rong - its pretty easy to add future components without thinking about variable/function overlap</div>

Summary
